**Did You Know?**

- The Darwin Martin House was designed by world-famous architect Frank Lloyd Wright around 1905.
- Today it is a museum but it was originally built for one family - The Martins! That’s why we call it the "Martin House.”
- There are six different buildings in the complex, including stables for horses, a guest house, and a separate house for the gardener!
- Imagine you’re taking a walk in a place that is very flat with a lot of open fields, few trees, and big open skies. That’s what a prairie looks like.
- The Martin House was built in the "prairie style"—meaning there are lots of long, horizontal, straight lines (remember prairies are flat), plus groups of windows, and blending with the landscape.

**Activity Break!**

**Sidewalk chalk art glass project**

Check out page two for the How-To courtesy of the Frank Lloyd Wright Trust.
Frank Lloyd Wright designed incredible art glass windows for his buildings inspired by geometry and nature. Experiment with color, geometry and patterns as you create your own Art Glass Sidewalk.

- Look up examples of Frank Lloyd Wright's windows online for inspiration.
- Use masking tape or painter's tape to mark out a pattern of shapes on your sidewalk.
- Color in the shapes with different chalk colors.
- Peel away the tape to reveal your finished design!

Experiment! Leave some shapes blank to create interesting contrast.

Tag @flwtrust or #WrightatHome and show us your designs.
